

国際会議 アジア・太平洋地域における ランドスライドハザードとその管理

宮 城 豊 彦*

International Conference on “Management of Landslide Hazard in the Asia-Pacific Region”

Toyohiko MIYAGI*

Abstract

Mitigating landslide hazards is the ultimate objective of the Japan Landslide Society and the general goal of this international conference. The conference was held at Sendai city, Japan. The major themes of counter measure, simulation and monitoring, environmental issues, risk evaluation, mapping, education and case studies were discussed through 40 oral presentations and 42 poster presentations. In particular, the Country Report Session presented clear strategies by exchanging and sharing technological knowledge, and obtaining a scientific understanding of landslide phenomena and hazards not only locally but also on a global scale. Representatives from Japan, China, Nepal, Pakistan, Vietnam, Thailand and Indonesia made presentations. The field trip was also very valuable because of the individual epochs and fine weather. More than 200 landslide specialists from 30 countries participated in the conference.

Key words : landslide, Japan Landslide Society, landslide management, country report

キーワード : 地すべり, 日本地すべり学会, 地すべりの管理, 国別報告
